

Data Exposure Assessment

Proactively detect breaches before they happen, and minimise your online data exposure, with dark web and intelligence experts.

Next to phishing, stolen credentials are the leading cause of compromises.

CyberCX Intelligence can find your organisation's and employees' credentials online before a criminal does. This gives you options to respond quickly to manage associated risks. Our approach combines the speed and comprehensiveness of automation, with the flexibility of human searching and analysis across a range of dark, deep and clear web sources.

Ideal for

- ▶ Any organisation, big or small, as an essential and affordable annual cyber hygiene activity.
- ▶ Any organisation that suspects (or knows) their data has been involved in a breach.
- ▶ Assurance and risk management at any time of heightened risk, like a high-profile business change (e.g. M&A, IPO, launch of a new digital product or service).

Why CyberCX Intelligence?

CyberCX Intelligence is a unique Australia and New Zealand (AUNZ) capability, with unparalleled visibility into our region. Embedded in the region's leading cyber and cloud services company, we have the information, access and context to give our customers a decision advantage.

CyberCX Intelligence customers receive actionable, contextualised intelligence, analysed by experts in the AUNZ threat landscape. Our insights are relevant to your geography, sector and organisation. And they're written in Plain English, able to influence executive leaders and quickly inform operational teams.

Empower yourself and your organisation with a two-way intelligence partnership, designed for your organisation and how you plan to use it.

Organisational benefits:

Prevent cyber attacks

Both criminal and nation-state threat actors actively search for leaked credentials to use in cyber attacks. Seize the chance to be proactive by identifying, and actively managing, your organisation's data exposure.

Confidence about the extent of your organisation's exposure

The rate of data breaches is growing. If your organisation (or staff) has been affected by a breach, gain assurance about what was exposed.

The benefit of the human touch

Threat actors change their means of communication and tradecraft regularly. When criminals change, we do too. Automated platforms can be slower to adjust their aperture to suit the evolving Australian and New Zealand threat landscape.

Scalable to most sizes, budgets

We will find a cadence and scope to make this service accessible to as many AUNZ organisations as we can.

What does a CyberCX Intelligence Data Exposure Assessment offer?

Phase 1: Discovery

We work with you to develop search terms relating to your assets, services, technologies, systems, domains and key personnel.

Phase 2: Assessment

We conduct reconnaissance, intelligence collection and intelligence analysis to find your data. In addition to examining traditional open sources, we search:

- ▶ Criminal sharing platforms
- ▶ Online code sharing repositories, paste sites and document sharing sites
- ▶ Leak sites used by cyber extortion groups
- ▶ Closed forums used by threat actors, such as Telegram channels.

Phase 3: Findings and recommendations

It's not uncommon for us to find information indicating an imminent or in-progress breach. If we do, you'll know as soon as we do.

After our assessment, you'll receive a final report with detailed findings and recommendations for risk mitigation. Our final reports include an executive summary written for senior management, as well as more detailed information for technical stakeholders.

Additional options

CyberCX Intelligence also offers ongoing data exposure monitoring for a fixed period (e.g. during a higher risk business change or product launch) or indefinitely. We can also surge quickly if you've been affected by a third party data breach to triage the impacts of any exposed data. Talk to us to design a solution to fits your needs.

Dedicated, experienced analysts you can rely on

- ▶ Intelligence analysts with 3+ decades' combined experience in complex cyber crime and dark web investigations, who'll surge quickly as an extension of your team.
- ▶ The largest team focussed on Australia and New Zealand cyber intelligence, trusted by some of our region's biggest brands in the private and public sector.
- ▶ Dozens of Data Exposure Assessments completed already this year, covering major financial institutions, critical infrastructure operators, government departments and diverse companies. In every case, we found high-value information our customer wasn't aware of.
- ▶ Every year, CyberCX Intelligence issues 100+ proactive notifications to Australian and New Zealand organisations when we find information that indicates an imminent or in-progress breach. In several cases, we have let organisations avoid harm, or to detect and contain an active threat.

Investment

One-off

- ▶ Point in time assessment
- ▶ Visibility across corporate domain, key persons, platforms and other search terms
- ▶ Immediate alerting on threats
- ▶ Comprehensive report with mitigation advice.

\$10,000 per assessment

Quarterly

- ▶ Initial historic deep background scan
- ▶ Ongoing quarterly top up scans and reporting
- ▶ Proactive alerting of domain mentions on criminal forums.

\$25,000 per annum

Monitoring

- ▶ Initial historic deep background scan
- ▶ Year round business hours alerting of detection of corporate domain or search terms
- ▶ Monthly reporting including cyber crime trends globally, within AUNZ and sector.

\$60,000 per annum

About CyberCX

CyberCX is the leading provider of professional cyber security and cloud services across Australia and New Zealand. With a workforce of over 1,300 professionals, we are a trusted partner to private and public sector organisations helping our customers confidently manage cyber risk, respond to incidents and build resilience in an increasingly complex and challenging threat environment.

Through our end-to-end range of cyber and cloud capabilities, CyberCX empowers our customers to securely accelerate opportunities in the digital economy.

Our expertise is represented across 12 cyber security and cloud practices:

- ▶ Strategy & Consulting
- ▶ Governance, Risk & Compliance
- ▶ Security Testing & Assurance
- ▶ Privacy Advisory
- ▶ Identity & Access Management
- ▶ Network & Infrastructure Solutions
- ▶ Cloud Security & Solutions
- ▶ Managed Security Services
- ▶ Cyber Capability, Training & Education
- ▶ Cyber Intelligence
- ▶ Digital Forensics & Incident Response
- ▶ Cyber Strategic Communications

Contact us to find out how CyberCX can boost the cyber security skills of your entire organisation.
